1. Claims 11-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Fig. 3 and the written description (page 6, lines 5-23) disclose a resurf type MOS transistor having a ground electrode connected to a p-type layer which formed under the n-type drain region [12]. However, the specification never discloses the function of a device having a drain terminal of each of the two symmetrical MOS transistor structures being connected to one another and a layer on which the drain region is situated and having a doping that is opposite that of the conductivity of the drain region as claimed in claim 11. It is believed that one skilled in the art is unable to use the claimed invention because there is no clear explanation in the specification as how the claimed device is function.

2. Claims 9, 10 and 13-16 are allowed.

3. The following is a statement of reasons for the indication of allowable subject matter: The major difference in the claims not found in the prior art of record is a bi-directional semiconductor component comprising: a drain terminal of each of the two symmetrical MOS transistor structures being connected to one another, and a zone having a conductivity that is the same as a conductivity of the drain region and having a doping that is higher than a doping of the drain region is doped upstream from a pn

junction of one of the two symmetrical MOS transistor structures in a junction area with the drain region.
